

# 04.03.17 Online Ordering Releases

## Enhancement

### Notifications

- **As a member I now receive an email confirmation when I place an order and when it is ready for pickup.**

Use Case: Previously, without the Mobile App, notifications did not go out to Members when orders were placed and/or ready for pick-up. Now, ensure your Members are aware of the order they placed as well as their order's ready status via email confirmations.

## Bug Fix

- Updated ordering API to handle statuses passed as text instead of the enumerated status types of the API method.
