Enhancements

CRM

- **Enhanced export capabilities by allowing CE Admins to mass export files and documents that have been uploaded to CRM for users.**

Use Case: Previously, Users did not have the capability to export more than one file or document at a time. Now, CE Admins can perform a mass export on demand for Users, exporting multiple documents and files at once.

Bug Fixes

- Fixed an issue with CRM Queries/Reports when Phone Numbers were exported to Excel, they were appearing with HTML tags.
- Fixed an issue with CRM Add a New Record - Certain Child Buttons were previously missing on Mobile view.
- Fixed an issue with Event Notifications not saving or updating the content or appearing in the preview window.
- Fixed an issue with the My Reservations plugin on the Website, when Users click specific hyperlinks to their reservations, they will now correctly be taken to their reservation.
- Fixed an issue with Branded Apps, where the Club logo was not perfectly horizontally centered.
